## ERP user guide

1. In order to provide data through integration interfaces, it is a prerequisite that the supplier submitting the data be registered in register of PAI:

Registration of produ	cers Waste manager Waste produ	cers GII organization Ac	Iministration of deposit PAI a	accounting Operational docume
PAI registration PAI in	The commutation Register in register of PAI	History of registration in the reg	ister of PAI

Agree					

5. If we use the REST web service, we click "Generate new" and create a digital certificate. Certificates are based on RSA public key technology, which uses private (protected user) and public (protected GPAIS) keys. In the Business Management System IP Addresses section, enter the IP address of the business management system from which the calls will be executed:

Save Cancel					

Once you've generated and entered everything press the "Save" button, if you want to save the data.

6. You can import goods/ sales unit's lists data from XML files. You select Data Import in the navigation menu and click on the "select" button to select a file.:

ERP Integration	Terms of agreement	Configuration	Data import	Result of import	Help
Data import					
Select file of products to import	ist.xml				
Import					

After selecting the xml file, click the "Import" button and the data will be loaded into GPAIS. You can view the data upload results in the "Results of import" section.

If you want to import your product journal records, you need to use the REST integration service. A more detailed description of the operation and service data is provided in the design document, which can be found in the https://www.gpais.eu/en/pagalba.

7. The results and import trends can be seen on the VVS "Results of import" page:
